Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Miscellaneous Metal Parts and Products were proposed on August 13, 2002, and promulgated on January 2, 2004. These regulations apply to both existing and new facilities with miscellaneous metal parts and products surface coating operations, and associated equipment or containers used for mixing, conveying, storage, or waste. New facilities include those that commenced construction or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR Part 63, Subpart M.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance,

and are required of all affected facilities subject to NESHAP.

Form Numbers: None.

Respondents/affected entities: Respondents are existing facilities and new facilities with miscellaneous metal parts and products surface coating operations, and associated equipment or containers used for mixing, conveying, storage, or waste.

Respondent's obligation to respond: Mandatory (40 CFR 63, Subpart Mmmm).

Estimated number of respondents: 390 (total).

Frequency of response: Initially, occasionally, and semiannually.

Total estimated burden: 179,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$20,600,000 (per year), which includes \$240,000 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: The adjustment decrease in burden is due to more accurate estimates of existing and anticipated new sources. The EPA identified a large decrease in the number of respondents subject to the subpart during an inventory conducted for the Risk and Technology Review for the source category. The decrease in respondents also results in a decrease in the number of respondents and a decrease in the O&M costs.
